

Face shield from a key keg! 1

001 standard 20ltr key keg – makes approx 8 face shields!

002 unscrew the top plate

003 if you dont have pressure release tool use a screwdriver (nb –don't push the middle or you may get a face of beer!)

004 puncture both layers with something sharp –depressurise first!

005 use snips to cut both layers round below curve

006 remove top and bladder

007 cut base off (top layer)

008 remove base

009 from open end cut to base of label down seam

009A don't cut all the way down top layer or will spring apart!

010 cut other side down seam

011 discard label

012 cut round end about half way in

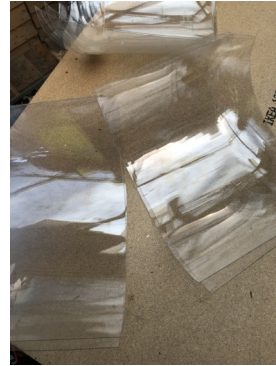

Face shield from a key keg! 2

013 you should have 4 half's

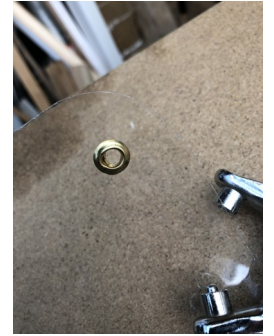

014 cut these in half

014A 8 new half's

015 round off sharp corners and punch holes

016 fit eylet (optional)

017 fit elastic & knot at ends (this is head size adjustment)

018 cut insulation / packing material (foam)

019 cut double sided tape same size

020 fit double sided tape to shield first

021 bend foam before fitting to double sided tape (to improve shape)

021A foam fitted

022 result!

Cheers!
